FEATURE STORY

Research investments bring potential cancer treatments one step closer

The LSI has held its annual symposium since before there was a building to house the institute.

With the symposium entering its fifteenth year, we're pleased to announce this signature event has been named the Saltiel Life Sciences Symposium thanks to an endowment made possible by the generous support of the LSI's faculty, Leadership Council, Scientific Advisory Board and friends. The name recognizes the leadership and scientific contributions made by former LSI Director Alan R. Saltiel during his thirteen-year tenure.

The theme of the 2016 symposium, which will be held May 10, is Chemical Biology: Rise of the Cellular Machines.

New investments are accelerating an innovative approach to discovering potential cancer treatments that was developed at the University of Michigan Life Sciences Institute.
